Museum of Rail Travel

This is a photograph of Ingrow West Station. It is one of the stations on the **Keighley and Worth Valley Railway**.

The station building has not been here very long. It came from another station, called Foulridge, in Lancashire. Foulridge did not need a station building, so it was pulled down, stone by stone, and each stone was given a number. The stones were loaded onto lorries and brought to Ingrow. Here they were put together again, like a jigsaw puzzle, in order to re-create the station building.

Find the Foundation Stone, which was laid when the re-building began.

When was it laid? _____

What was the surname of the man who laid it? _____

Below is the totem, or station sign. Write in the name of the station.

There is a tunnel through the hill at the end of the platform. You can see the tunnel mouth.

Before a train enters a tunnel, the engine driver blows the engine's whistle.

Why do you think the driver does this? _____

Why do you think it is dangerous to walk through tunnels? _____

Turn over and draw the tunnel entrance with the signs at the side of it. Draw an engine coming out of the tunnel.
